DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, and 47-82 drawn to a composition comprising a carrier and a plurality of light emitting nanoparticles, classified in class 424, subclasses 400, 489.
- II. Claims 14-31, and 83-136, drawn to a method for photodynamic therapy, classified in class 424, subclasses 9.3, 9.4, 9.6.
- III. Claims 32-46, drawn to an illumination system, classified in class 604, subclass 20.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method claimed can be used in many different ways, as is demonstrated by Applicant's instant claims, which include nanoparticles alone, mixtures of nanoparticles, nanoparticles conjugated to photodynamic therapy drugs, and nanoparticles attached to a polymer..

Art Unit: 1615

Inventions I and III are both drawn to products. However, the inventions are distinct because an illumination system can be used for photodynamic purposes without the presence of nanoparticles, as required by the claims in invention I (such as with liposomes). Furthermore, illumination systems can be used for other purposes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Election of Species

This application contains claims directed to the following patentably distinct species of the claimed invention:

If either Group I or Group II is elected, Applicant is required to make the following election of species:

- A. nanoparticles alone
- B. a mixture of nanoparticles
- C. nanoparticles conjugated to a photodynamic drug
- D nanoparticles linked to a polymeric backbone

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Art Unit: 1615

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
